Summary

I am seeking a degree apprenticeship to combine academic study and my existing skills in a practical environment to gain valuable experience in a competitive, everchanging field. I have professional full-stack development work experience as part of my T level course (315 hours), as well as extra time dedicated for gaining experience during holidays (1.5+ years). Having also developed high level projects in my free time, my skillset aligns perfectly with one needed for my next steps in a degree apprenticeship. I have a strong, enthusiastic mindset about growing as a person and the future of software engineering, team building, and problem solving. I am persistent and extremely eager to learn new skills and **willing to relocate**.

Experience

1.5+ years of work experience (as part of my course) at the University of Exeter (PROTECT Dementia Research) contributing to both backend and frontend systems:

- **Developed an automated Python script** to convert CSV data to JSON across multiple languages for a new database integration, saving the team hours of manual work.
- **Developed React JS, HTML/CSS Website** to promote the innovation in digital health provided by the PROTECT team.
- **Developed C# Windows Application** to add, remove, and track live patient DNA samples through an interactive UI.
- **Developed Java/Kotlin Application** to scan barcodes and apply them to a database.
- **Developed JavaScript & Cypress** Automated Testing Tool for user login system
- **Diagnosed and fixed C# Bug** caused by chrome extension.
- **Uploaded to GitHub** for version control and collaboration.

I was **Reviewed Exceptionally** by the team.

Education

Graduated with Merit (equivalent to BBB at A levels) in T level Digital Production Design and Development at Exeter College.

GCSES:

- Computer Science: 6
- English Language: 6
- Combined Science: 6-5
- English Literature: 5
- Maths: 5
- Geography: 5
- Music BTEC: Merit

Skills

Versatile: Strong in both backend and frontend practices-

- Event driven development
- Object Orientated Programming
- Multithreading & System Performance

Engineering:

- Debugging
- Automation
- Version Control
- Database Integration
- Documentation
- Logging

Programming Languages:

- Java/Kotlin
- Python
- C#
- React, JavaScript, HTML/CSS

Software/Tools:

- JetBrains, Microsoft Visual Studio, Microsoft Visual Studio Code
- Microsoft Teams, Microsoft Word, Microsoft Excel
- Git
